

Fantuzzi Parts

The Italian Fantuzzi Group offers a glut of material handling equipment and heavy machinery. The equipment consists of numerous equipment specializing in transporting, loading and unloading goods. The railway freight sector and the port authority require a large portion of their equipment.

Initially beginning in the 1960s as a zoo-technical and agricultural equipment manufacturer in the province of Reggio Emilia, Fantuzzi has grown to become a global leader in the heavy equipment industry. Now a multinational firm, the company gradually expanded after welcoming successful advancements and overcoming a large number of technological challenges. Luciano Fantuzzi is the President and founder of the group. In 1967, the group started making side lift trucks specifically for hauling timber and extended materials such as metal rods that weighed between three to 5 tonnes. The business enjoyed frequent orders and completed 60 units in the 2nd; approximately 5 times greater than their first year sales.

Within a short amount of time, the company took off exponentially. In 1968, a heavy-duty side-loader British model that was capable of lifting up to 32 tonnes inspired Luciano Fantuzzi. He wanted to create something that had more power with a similar style. After finishing this machine and achieving his goal, Luciano began receiving orders from French Railways, Fiat and many others. Today, the Fantuzzi Group Italy has a number of manufacturing plants around the globe including Italy, Germany and China. The company proudly exports to 162 countries.

Fantuzzi has generously offered its patented knowledge with nations all over the world with the goal of making the material handling, heavy equipment and transportation industries more convenient. Advancements and digital technology are helping to revolutionize the industry.
