

## Counterbalance Forklift License Goodyear

Counterbalance Forklift License Goodyear - Forklifts, when operated by completely trained personnel, are a major advantage to companies. We provide a comprehensive training program including all parts of operating a powered lift device. Counterbalance forklift training provides forklift operators with the knowledge and practical skills needed to efficiently and safely operate forklifts. The program offers a combination of classroom theory, participant observation and hands-on training within a warehouse-type environment. Training can be customized and/or on site.

The course includes the fundamentals of powered lift trucks, like for instance regulations and rules, parts, factors affecting stability and load centres. General operating procedures are taught, like startup, circle check, forward/reverse on level ground, shutdown, and operating around other people. Load handling subject matters comprise selection of loads, load pickup and placements, loading and off-loading trailers and load security and integrity. Participants would learn operational maintenance procedures, such as recharging and refueling. Workplace safety issues would be talked about. Individuals participating would know the environmental conditions affecting the performance of the lift truck and be able to recognize potential dangers. Advanced training on propane handling could be incorporated.

Employers and their employees may face penalties if they do not operate according to national and industry standards. Employees operating a counterbalance forklift will have to be knowledgeable concerning the safe operation rules of their forklift. Training is suggested for anybody applying for a job that needs forklift operation.

We provide in-class theory and hands-on training inside personalized, small classes. Training options include entry level or refresher courses.

### Entry-level Course Outline:

For anybody entering the workforce as a counterbalance forklift operator, this training course is for you. The successful student should pass a series of practical and written tests to finish the program. Subject matter consists of: general operating procedures; fundamentals of powered lift trucks; load handling; operational maintenance; workplace safety; basic regulations and rules.
