

Linde Forklift Parts

Linde Material Handling is one of the largest manufacturing companies in the world specializing in forklifts and warehouse equipment. For over 5 decades, the company has been raising the bar for industrial trucks, high performance material flow solutions, driver assistance systems and fleet management. Linde has produced a diverse set of equipment designed to take care of individual buyer requirements.

As one of the global leaders in manufacturing warehouse equipment and forklifts, the firm operates in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the second largest manufacturer of industrial trucks across the globe.

Operating in over 1 hundred countries around the world with its' own branches, Linde is widely respected within the industry. There are assembly and production departments in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales retailers. The company's fleet is really expansive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde builds the fleet and their vehicles specifically customized to their clients wants.

Linde also produces high-performance choices for intralogistics with warehouse equipment, electric and diesel forklifts, automation solutions, fleet management software, financing options and driver assistance systems. The company provides complete operator training and forklift services.

There have been many improvements in automation, digital networking and the demand for more specific equipment across numerous industries; contributing factors that are driving technological improvement within the intralogistics realm. Linde Material Handling strives to help its' end users meet and exceed their material management challenges. Client satisfaction is paramount at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they provide its' end users with a sustainable advantage.
